- A: WARNING: Refer to safety chapters
- B: CONDUCTION CHAMBER
- C: FAN SUPPORTS
- D: UPPER METAL CASE
- E: SERIAL PLATE
- F: LOWER METAL CASE
- G: VENT
- H: BOTTOM PLATE
- I: HANDLE

DAILY USE.

STEP 1  
Break Charcoal into Pieces.

- Place the charcoal in a sturdy metal container on a flat, level, resistant surface.
- Using your hands or a heavy object, quickly break the charcoal into small pieces.
- Be sure to wear eye protection and avoid breathing in dust.
- Place the charcoal in a well-ventilated area to avoid breathing any gas or particles.
- Break the charcoal to the best condition into small pieces.
- Store the charcoal in a safe place or transfer it into the container.

- CAUTION!** Caution: Precautions for breaking charcoal into small pieces. Do not break charcoal in a confined space or breathing in dust.

STEP 2  
Pour Charcoal into Holy Cook Stove.

- Before using the Fan Supports are only open up to allow easy pouring of charcoal.

- Once the charcoal has been broken into small pieces, use a metal spoon or scoop to transfer it into the conductive.

- Avoid overfilling the stove with charcoal as this can lead to poor combustion and inefficient heat distribution. Refer to the stove manual for recommended charcoal capacity.

STEP 3  
Light up Charcoal.

A WARNING

- Always use a lighter or match to light the charcoal in a safe environment. The manufacturer is not responsible in case of the burner malfunctioning.

- Always light the charcoal from the bottom of the stove.

- Light the charcoal using a small amount of oil or grease. The manufacturer is not responsible in case of the burner malfunctioning.

- Continue adding small amounts of charcoal until the stove is lit.

- As the smoking or vapor begins to rise from the stove, open the charcoal and start the combustion.

STEP 4

Place your Cookware on the Stove.

A WARNING

- Always remove the Cookware down before you turn off the stove.

- If the fan is accidentally open, do not use the cookware until the charcoal is completely lit.

- Make sure that the fan is correctly open to allow enough air to pass through the fan.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

STEP 5  
Fan the vent to get right heat level.

A WARNING

- Always remove the Cookware down before you turn off the stove.

- If the fan is accidentally open, do not use the cookware until the charcoal is completely lit.

- Make sure that the fan is correctly open to allow enough air to pass through the fan.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Do not use the cookware until the charcoal is completely lit.

- Before turning the fan, use the charcoal in the fan and burning evenly.

- Start turning the fan slowly by blowing air into the opening at the bottom of the fan. This will help ignite the fan and increase the temperature.

- Hold the fan close to the vent and gently blow air into the stove. Do not blow too hard or too close to the charcoal as this could cause it to flare up or potentially cause burns or start a fire.

- Monitor the flame and adjust the heat as necessary to maintain the desired temperature.
